WHAT IS TEXTUREGUARD?

TextureGuard fuses a top layer of rich pigments with Belgard's core colour process. The result is a paver with a richness and purity of colour that's sleek and vibrant. With a base of coarser aggregates for a strong foundation and a top layer of wear resistant finer aggregates, you have a product with unparalleled colour vibrancy that will stand the test of time. That's the TextureGuard difference.

9 – QUALITY AND CLAIMS

We produce all Products to the appropriate standard specifications (CSA & ASTM). Products required to be manufactured to alternative specifications will be treated as special orders and be subject to the conditions set out above for special orders.

Variations in colour and shade range are inherent in concrete products due to the variation of aggregates, cement, oxide, and other variables through the curing manufacturing process. No claim will be allowed for any such variations. Submitted samples are to establish colour range, size and texture. Subsequent shipments may vary from such samples.

It is the buyer's responsibility to inspect and approve all Products delivered before installation. If the product is deemed to be unsatisfactory, Oldcastle APG Canada West must be notified before any installation is begun. The Company's liability for defective product shall be limited to replacing the defective material after an inspection and approval by your local Belgard sales representative.

Questions regarding quality, sizing, colour uniformity within a shipment or matching to prior shipments must be brought to the attention of a Belgard sales representative prior to installation.

Your receipt of any Products delivered will be an unqualified acceptance and a waiver by you, of any and all claims with respect to such Products unless you give us notice of a claim, in writing, within 15 days after such receipt. Once the Products have been installed, they are deemed fit for the purpose and become the responsibility of the installer. We will not recognize any claims made for Products that have been installed. You will be liable for any shortages on Products delivered, unless you give us notice of such shortages within 24 hours from receipt of delivery.

10 – EFFLORESCENCE

Efflorescence is a fine, white, powdery deposit naturally occurring phenomenon as various chemical salts make up a portion of the composition of the cement and aggregates used in the making of concrete masonry units, the mortar that binds the masonry units, and the grout that reinforces a concrete masonry wall system.

Efflorescence will usually wash or wear off in the course of time and the recommended procedure is to allow this natural process to occur. Oldcastle APG Canada West will not accept any responsibility for this problem. The removal of efflorescence from Products that have been installed is the responsibility of the installer.

11 – IMPURITIES

Impurities originating from concrete aggregates can occur due to the geological makeup of an area. Acceptable limits are based on CSA standard A23.1 Table 12 "Limits for deleterious substances and physical properties of aggregates" and petrographic analysis limits based on CSA 23.1 Table A2.1. The allowable limits for organics impurities such as coal is a colour plate maximum of 3; the maximum ironstone content for coarse and fine aggregate of 0.8% and 1.5%, respectively. It is the responsibility of the customer to inspect all Products prior to installation. No claims will be allowed for Product containing impurities after installation.

Except for payment obligations, neither of us will be liable for any failure or delay in performing an obligation that is due to causes beyond our reasonable control, such as natural catastrophes, governmental acts or omissions, laws or regulations, labor strikes or difficulties, transportation stoppages or slowdowns, or the inability to procure parts or materials.
